Engaged.

Overview

As Australia's leading provider of well engineering project management services, we're experts in lifecycle project delivery. We know what it takes to deliver projects safely.

That's why we've integrated our expertise in Health, Safety and Environmental (HSE) services to provide end to end support from project approval to execution.

Whether you need an HSE Management System for your well engineering project or tailored environmental and safety solutions for other operational settings, our team is here to provide the support you need.

What we do

Leveraging a wealth of field experience and complex project deliveries, we provide practical, scalable and executable HSE solutions and advice – making implementation easy for project managers and field teams.

Develop HSE plans and procedures

We work alongside you to develop robust HSE plans and procedures to support your business in safeguarding people, protecting the environment, and preserving your assets and reputation.

Execute and implement HSE systems

We execute and implement our ISO-certified Quality, Health & Safety, and Environmental Management Systems to ensure the safe, responsible, and compliant delivery of operations, offering a structured framework for risk assessment, incident reporting, compliance tracking, and performance monitoring

By developing, implementing and monitoring safety systems, tailored to your operations, our procedures, plans, and guides are designed for seamless integration into daily workflows, enhancing operational efficiency while enabling a positive and accountable safety culture across all levels of your organisation.

Why us?

With extensive experience across the energy sector, we're more than HSE specialists – we're trusted partners in shaping safer, more sustainable businesses for the energy sector. Our expert team is committed to helping you build a culture of safety excellence, ensuring that your operations meet the highest standards, every day. We're here to help you build a culture of safety and environmental excellence with systems, procedures, and experts to support your HSE goals.

Practical solutions

We design HSE procedures, plans and tools that integrate seamlessly into day-to-day operations for energy projects using our vast experience to make them simple to follow, easy to implement, and built for real-world use.

Certified and compliant

Operating under ISO 9001, 14001 and 45001, our certified systems form the foundation of every HSE framework we deliver.

Integrated environmental services

Our in-house environmental experts work alongside our HSE professionals to offer complete project coverage from approvals and compliance to incident response and reporting.

Safety ambassadors

As active members and contributors to Safer Together, we stay connected to evolving best practice and contribute to a safer, more consistent industry standard, so you get the benefits.

Our core services

ISO Quality, Safety, and Environmental System Implementation

We operate under certified ISO quality, safety, and environmental management systems - every project we deliver adheres to these standards. In addition, we access and influence industry-leading standards and specifications through membership of Safer Together, to ensure the safe and compliant delivery of your project.

HSE System Development

Using our ISO-certified Health, Safety, and Environmental (HSE) systems as a baseline, we develop bespoke HSE systems tailored to your needs. Whether adapting our existing documentation to align with project scope, location and risks, or creating new HSE management systems modelled on ISO standards, our customised safety systems—including procedures, plans, and guides—are designed to integrate seamlessly into your daily operations.

HSE investigations

Our trained and qualified team of investigators bring deep expertise in proven methodologies including ICAM, TapRoot, Human Factors, and 5 Whys. When an incident occurs, we identify and share learning in a way that informs and educates stakeholders at all levels. In addition, for environmental incidents, our in-house team can evaluate impacts, prepare remediation reports, and delivers actionable recommendations.

HSE audits and verification

Effective HSE systems require ongoing verification. Our lead auditors review systems, system implementation and verify the effectiveness of controls, harnessing a learning culture to identify weaknesses and opportunities for improvement shared.

HSE Improvement Plans

Continuous improvement is essential for maintaining a safe and environmentally responsible workplace. We assist our clients by analysing data, identifying trends, and developing actionable HSE improvement plans, focused on simplicity and measurable outcomes.

Critical Control Management

As specialists in well delivery, we understand the critical importance of primary and secondary barriers in preventing major accident events. We apply critical control thinking to all aspects of our work, developing critical control management plans and verification processes for any operation.

Emergency response planning

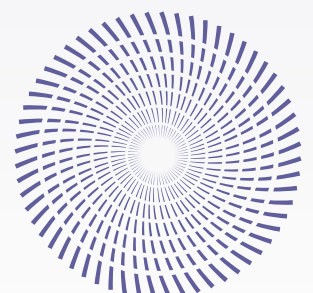

Our emergency response planning equips teams with clear, actionable protocols for evacuations, first aid, and crisis management. We ensure your organisation is prepared to respond swiftly and effectively should the need arise.

Risk Assessments

We conduct risk assessments in accordance with ISO standards, using best practices from around the world to identify and mitigate risks. In addition, our unrivalled experience in delivering energy projects offers access to a team of Australia's most experienced engineers, project managers, and HSE professionals as Subject Matter Experts, on-hand to support and inform your risk management processes.

Incident management

We maintain effective incident management protocols to ensure all incidents are escalated promptly, with reporting aligned to client requirements and regulatory obligations, including mandatory notifications for serious incidents within stipulated timeframes. Where investigations are required, our trained analysts identify causal factors to extract key learnings, which we communicate through alerts, presentations, or tailored updates. For serious incidents, we support clients in demonstrating continuous improvement by implementing corrective actions and formally documenting enhancements to processes, systems, or training.
